Problem - Solution Fit Canvas Analysis

Date: 31 January 2026	**Team ID:**
Project: Global Electric Vehicle Market Performance Analysis	**Institution:** Medi-Caps University

Canvas Dimension	Detailed Analysis & Strategic Fit
1. Customer Segment(s)	Senior Automotive Strategy Directors, Fleet Procurement Leads, and Clean-Tech Investors benchmarking 200 EV manufacturers.
2. Jobs-to-be-Done	Benchmark 200 OEMs, evaluate NMC vs LFP battery degradation over 5 years, and assess driving autonomy across vehicle categories.
3. Triggers	Corporate net-zero fleet decarbonization deadlines, battery raw material volatility, and competitive OEM product launches.
4. Emotions (Before / After)	Before: Overwhelmed by fragmented telemetry and anxious about battery degradation. After: Confident, analytically empowered with board-ready dashboards.
5. Available Solutions	Manual Excel sheets (crash at 200k rows), isolated OEM brochures, and high-cost static analyst reports.
6. Customer Constraints	Tight capital expenditure budgets, short procurement turnaround, and sub-second dashboard SLA requirements.
7. Behaviour	Daily review of regional sales numbers, range-to-price ratios, and battery cycle longevity metrics.
8. Channels	Online: Cloud BI portals, Tableau Public, Snowflake Snowsight. Offline: Procurement committee presentations, automotive summits.
9. Root Cause	Exponential growth in EV models without centralized data warehousing or standardized battery testing protocols.
10. Your Solution	An integrated cloud-native platform combining Snowflake star-schema warehousing, 9 Tableau worksheets, a 10-Scene Story, and Flask web portal.
